***Election/Restriction***

I. The Applicant responds Requirement for Restriction, filed on 07/11/08, and elects Species III, claims 37-44, which is included in one of the embodiments in the specification. However, elected claims 37-44 are still distinct and new claim 45 is added in which Group III and new claims raises another distinct. Therefore, a new requirement for Restriction is made as following:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 37-40 are drawn to an image **processing** apparatus and method for given image data and **outputs image data to a specific apparatus** in which a color space specifying unit operable to specify a color space according to **the specific apparatus**;

II. Claims 41-44, are drawn to an image **printing** apparatus and method for **executing printing** in which a color space specifying unit operable to specify a color space according to the **image printing apparatus**;

III. New claim 45, is drawn to an image printing apparatus in which a format judging unit operable to judge a **format or type of an image file based on an extension, header information, and a data sequence of the image file**, for each of the obtained data; an image processing unit operable to **execute a predetermined image processing for the image data based on the judged format**.

The inventions are distinct, each from the other because of the following reasons:

Inventions I to III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if at least one subcombination is

separately usable. In the instant case, each invention has separate utility such as operating either independently or in combination with other subcombinations according to the particular claimed limitations which characterize the invention, without requiring the particular limitations which characterize the other invention(s), as indicated above. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above, requiring separate consideration and search, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other inventions.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
